

WHAT WE DO

Beginning in March 2016, we have been developing block chain technology and virtual currency exchanges.

Since 2017 we have gathered excellent engineers from AI and IoT and are working on development of block chains, AI, IOT, real-time image processing and so on. For the fashion industry and others, we are working not only on AI technology but also on developing smarter and more secure systems incorporating block chains. Always introduce state-of-the-art technology (server side is node, ruby, python, applications are reactive, xamarin, infrastructure is AWS, AI, IoT, block chains). As a system development company specializing in offshore development, its strength is that it can respond to advanced technologies.
